

# South Florida Water Management District Development • Wetlands • Hydrology

## Surface Water & Flow Wetlands

## Waterbodies

## Waterways

## Drainage Pathways

## Development

Developed (1985)

Developed (2024)

## Methodology

- Regional analysis integrating development, wetlands, surface water, and modeled drainage patterns.
- Drainage pathways were modeled from a 10-meter DEM using flow accumulation.
- Development and hydrology are displayed using scaledependent visibility to improve regional readability.
- Modeled drainage pathways represent probable surface flow and should not be interpreted as surveyed streams or regulatory water features.

## Data

- USGS National Land Cover Database (NLCD)
- USGS 10-meter Digital Elevation Model (DEM)
- U.S. Fish & Wildlife Service National Wetlands Inventory (NWI)
- OpenStreetMap

Projection: USA Contiguous Albers Equal Area Conic (EPSG:5070)
